

# Ultimate Touch Control Project for Korg Volca Bass

## Installation & User Guide

### Chapter 1 - Welcome

Thanks for choosing Ultimate Touch Control, a advanced project for Lemur iOS app for controlling midi music instruments.

What Lemur is :

- Lemur is a controller: its purpose in life is to provide hands-on control over software running on a computer, or other connected devices such as samplers, synthesizers etc.
- Lemur uses two communication protocols: MIDI and Open Sound Control. Software or hardware must comply with at least one of those protocols to be controlled by Lemur.
- MIDI hardware can be connected directly to an iOS device running Lemur through a CoreMIDI compatible device such as iConnect MIDI or Alesis iO Dock, or via the Apple Camera Connection Kit and a compliant USB-Midi device. ... and what it is not. Lemur does not produce any sound by itself. There is plenty of wonderful software and hardware out there perfectly doing that job. Lemur is here to make the use of that software and hardware more efficient, intuitive and hands-on. It is not restrained like conventional hardware.
- Lemur and their respective logos are trademarks of liine. [Liine](#) Lemur is an application for IOS and Android

- **Chapter 2 - Description**

*Ultimate Touch Control Project for Korg Volca Bass.*

With UTC-LEM-KVB you are master of the performance, taking full control of your Korg Volca Bass.
